

Edison would design visually dazzling experiments to display his discoveries with electricity. He would talk of future inventions that seemed fantastic at the time—robots, and machines that could photograph thought—and that he had no intention of wasting his energy on, but that made the public talk about him. He did everything he could to make sure that he received more attention than his great rival Nikola Tesla, who may actually have been more brilliant than he was but whose name was far less known. In 1915, it was rumored that Edison and Tesla would be joint recipients of that year's Nobel Prize in physics. The prize was eventually given to a pair of English physicists; only later was it discovered that the prize committee had actually approached Edison, but he had turned them down, refusing to share the prize with Tesla. By that time his fame was more secure than Tesla's, and he thought it better to refuse the honor than to allow his rival the attention that would have come even from sharing the prize.

If you find yourself in a lowly position that offers little opportunity for you to draw attention, an effective trick is to attack the most visible, most famous, most powerful person you can find. When Pietro Aretino, a young Roman servant boy of the early sixteenth century, wanted to get attention as a writer of verses, he decided to publish a series of satirical poems ridiculing the pope and his affection for a pet elephant. The attack put Aretino in the public eye immediately. A slanderous attack on a person in a position of power would have a similar effect. Remember, however, to use such tactics sparingly after you have the public's attention, when the act can wear thin.

Once in the limelight you must constantly renew it by adapting and varying your method of courting attention. If you don't, the public will grow tired, will take you for granted, and will move on to a newer star. The game requires constant vigilance and creativity. Pablo Picasso never allowed himself to fade into the background; if his name became too attached to a particular style, he would deliberately upset the public with a new series of paintings that went against all expectations. Better to create something ugly and disturbing, he believed, than to let viewers grow too familiar with his work. Understand: People feel superior to the person whose actions they can predict. If you show them who is in control by playing *against* their expectations, you both gain their respect and tighten your hold on their fleeting attention.

Image:

The Limelight. The actor who steps into this brilliant light attains a heightened presence. All eyes are on him. There is room for only one actor at a time in the limelight's narrow beam; do what ever it takes to make yourself its focus. Make your gestures so large, amusing, and scandalous that the light stays on you while the other actors are left in the shadows.

Authority: Be ostentatious and be seen.... What is not seen is as though it did not exist.... It was light that first caused all creation to shine forth. Display fills up many blanks, covers up deficiencies, and gives everything a second life, especially when it is backed by genuine merit. (Baltasar Gracián, 1601-1658)

PART II: CREATE AN AIR OF MYSTERY

In a world growing increasingly banal and familiar, what seems enigmatic instantly draws attention. Never make it too clear what you are doing or about to do. Do not show all your cards. An air of mystery heightens your presence; it also creates anticipation—everyone will be watching you to see what happens next. Use mystery to beguile, seduce, even frighten.

OBSERVANCE OF THE LAW

Beginning in 1905, rumors started to spread throughout Paris of a young Oriental girl who danced in a private home, wrapped in veils that she gradually discarded. A local journalist who had seen her dancing reported that “a woman from the Far East had come to Europe laden with perfume and jewels, to introduce some of the richness of the Oriental colour and life into the satiated society of European cities.” Soon everyone knew the dancer’s name: Mata Hari.

Early that year, in the winter, small and select audiences would gather in a salon filled with Indian statues and other relics while an orchestra played music inspired by Hindu and Javanese melodies. After keeping the audience waiting and wondering, Mata Hari would suddenly appear, in a startling costume: a white cotton brassiere covered with Indian-type jewels; jeweled bands at the waist supporting a sarong that revealed as much as it concealed; bracelets up the arms. Then Mata Hari would dance, in a style no one in France had seen before, her whole body swaying as if she were in a trance. She told her excited and curious audience that her dances told stories from Indian mythology and Javanese folktales. Soon the cream of Paris, and ambassadors from far-off lands, were competing for invitations to the salon, where it was rumored that Mata Hari was actually performing sacred dances in the nude.

The public wanted to know more about her. She told journalists that she was actually Dutch in origin, but had grown up on the island of Java. She would also talk about time spent in India, how she had learned sacred Hindu dances there, and how Indian women “can shoot straight, ride horseback, and are capable of doing logarithms and talk philosophy.” By the summer of 1905, although few Parisians had actually seen Mata Hari dance, her name was on everyone’s lips.

As Mata Hari gave more interviews, the story of her origins kept changing: She had grown up in India, her grandmother was the daughter of a Javanese princess, she had lived on the island of Sumatra where she had spent her time “horseback riding, gun in hand, and risking her life.” No one knew anything certain about her, but journalists did not mind these changes

in her biography. They compared her to an Indian goddess, a creature from the pages of Baudelaire—whatever their imagination wanted to see in this mysterious woman from the East.

In August of 1905, Mata Hari performed for the first time in public. Crowds thronging to see her on opening night caused a riot. She had now become a cult figure, spawning many imitations. One reviewer wrote, “Mata Hari personifies all the poetry of India, its mysticism, its voluptuousness, its hypnotizing charm.” Another noted, “If India possesses such unexpected treasures, then all Frenchmen will emigrate to the shores of the Ganges.”

Soon the fame of Mata Hari and her sacred Indian dances spread beyond Paris. She was invited to Berlin, Vienna, Milan. Over the next few years she performed throughout Europe, mixed with the highest social circles, and earned an income that gave her an independence rarely enjoyed by a woman of the period. Then, near the end of World War I, she was arrested in France, tried, convicted, and finally executed as a German spy. Only during the trial did the truth come out: Mata Hari was not from Java or India, had not grown up in the Orient, did not have a drop of Eastern blood in her body. Her real name was Margaretha Zelle, and she came from the stolid northern province of Friesland, Holland.

Interpretation

When Margaretha Zelle arrived in Paris, in 1904, she had half a franc in her pocket. She was one of the thousands of beautiful young girls who flocked to Paris every year, taking work as artists' models, nightclub dancers, or vaudeville performers at the Folies Bergère. After a few years they would inevitably be replaced by younger girls, and would often end up on the streets, turning to prostitution, or else returning to the town they came from, older and chastened.

Zelle had higher ambitions. She had no dance experience and had never performed in the theater, but as a young girl she had traveled with her family and had witnessed local dances in Java and Sumatra. Zelle clearly understood that what was important in her act was not the dance itself, or even her face or figure, but her ability to create an air of mystery about herself. The mystery she created lay not just in her dancing, or her costumes, or the stories she would tell, or her endless lies about her origins; it lay in an atmosphere enveloping everything she did. There was nothing you could say for sure about her—she was always changing, always surprising her audience with new costumes, new dances, new stories. This air of mystery left the public always wanting to know more, always wondering about her next move. Mata Hari was no more beautiful than many of the other young girls who came to Paris, and she was not a particularly good dancer. What separated her from the mass, what attracted and held the public's attention and made her famous and wealthy, was her mystery. People are enthralled by mystery; because it invites constant interpretation, they never tire of it. The mysterious cannot be grasped. And what cannot be seized and consumed creates power.

KEYS TO POWER

In the past, the world was filled with the terrifying and unknowable—diseases, disasters, capricious despots, the mystery of death itself. What we could not understand we reimagined as myths and spirits. Over the centuries, though, we have managed, through science and reason, to illuminate the darkness; what was mysterious and forbidding has grown familiar and comfortable. Yet this light has a price: in a world that is ever more banal, that has had its mystery and myth squeezed out of it, we secretly crave enigmas, people or things that cannot be instantly interpreted, seized, and consumed.

That is the power of the mysterious: It invites layers of interpretation, excites our imagination, seduces us into believing that it conceals something marvelous. The world has become so familiar and its inhabitants so predictable that what wraps itself in mystery will almost always draw the limelight to it and make us watch it.

Do not imagine that to create an air of mystery you have to be grand and awe-inspiring. Mystery that is woven into your day-to-day demeanor, and is subtle, has that much more power to fascinate and attract attention. Remember: Most people are upfront, can be read like an open book, take little care to control their words or image, and are hopelessly predictable. By simply holding back, keeping silent, occasionally uttering ambiguous phrases, deliberately appearing inconsistent, and acting odd in the subtlest of ways, you will emanate an aura of mystery. The people around you will then magnify that aura by constantly trying to interpret you.

Both artists and con artists understand the vital link between being mysterious and attracting interest. Count Victor Lustig, the aristocrat of swindlers, played the game to perfection. He was always doing things that were different, or seemed to make no sense. He would show up at the best hotels in a limo driven by a Japanese chauffeur; no one had ever seen a Japanese chauffeur before, so this seemed exotic and strange. Lustig would dress in the most expensive clothing, but always with something—a medal, a flower, an armband—out of place, at least in conventional terms. This was seen not as tasteless but as odd and intriguing. In hotels he would be seen

receiving telegrams at all hours, one after the other, brought to him by his Japanese chauffeur—telegrams he would tear up with utter nonchalance. (In fact they were fakes, completely blank.) He would sit alone in the dining room, reading a large and impressive-looking book, smiling at people yet remaining aloof. Within a few days, of course, the entire hotel would be abuzz with interest in this strange man.

All this attention allowed Lustig to lure suckers in with ease. They would beg for his confidence and his company. Everyone wanted to be seen with this mysterious aristocrat. And in the presence of this distracting enigma, they wouldn't even notice that they were being robbed blind.

An air of mystery can make the mediocre appear intelligent and profound. It made Mata Hari, a woman of average appearance and intelligence, seem like a goddess, and her dancing divinely inspired. An air of mystery about an artist makes his or her artwork immediately more intriguing, a trick Marcel Duchamp played to great effect. It is all very easy to do—say little about your work, tease and titillate with alluring, even contradictory comments, then stand back and let others try to make sense of it all.

Mysterious people put others in a kind of inferior position—that of trying to figure them out. To degrees that they can control, they also elicit the fear surrounding anything uncertain or unknown. All great leaders know that an aura of mystery draws attention to them and creates an intimidating presence. Mao Tse-tung, for example, cleverly cultivated an enigmatic image; he had no worries about seeming inconsistent or contradicting himself—the very contradictoriness of his actions and words meant that he always had the upper hand. No one, not even his own wife, ever felt they understood him, and he therefore seemed larger than life. This also meant that the public paid constant attention to him, ever anxious to witness his next move.

If your social position prevents you from completely wrapping your actions in mystery, you must at least learn to make yourself less obvious. Every now and then, act in a way that does not mesh with other people's perception of you. This way you keep those around you on the defensive, eliciting the kind of attention that makes you powerful. Done right, the creation of enigma can also draw the kind of attention that strikes terror into your enemy.

During the Second Punic War (219-202 B.C.), the great Carthaginian general Hannibal was wreaking havoc in his march on Rome. Hannibal was known for his cleverness and duplicity.

Under his leadership Carthage's army, though smaller than those of the Romans, had constantly outmaneuvered them. On one occasion, though, Hannibal's scouts made a horrible blunder, leading his troops into a marshy terrain with the sea at their back. The Roman army blocked the mountain passes that led inland, and its general, Fabius, was ecstatic—at last he had Hannibal trapped. Posting his best sentries on the passes, he worked on a plan to destroy Hannibal's forces. But in the middle of the night, the sentries looked down to see a mysterious sight: A huge procession of lights was heading up the mountain. Thousands and thousands of lights. If this was Hannibal's army, it had suddenly grown a hundredfold.

The sentries argued heatedly about what this could mean: Reinforcements from the sea? Troops that had been hidden in the area? Ghosts? No explanation made sense.

As they watched, fires broke out all over the mountain, and a horrible noise drifted up to them from below, like the blowing of a million horns. Demons, they thought. The sentries, the bravest and most sensible in the Roman army, fled their posts in a panic.

By the next day, Hannibal had escaped from the marshland. What was his trick? Had he really conjured up demons? Actually what he had done was order bundles of twigs to be fastened to the horns of the thousands of oxen that traveled with his troops as beasts of burden. The twigs were then lit, giving the impression of the torches of a vast army heading up the mountain. When the flames burned down to the oxen's skin, they stampeded in all directions, bellowing like mad and setting fires all over the mountainside. The key to this device's success was not the torches, the fires, or the noises in themselves, however, but the fact that Hannibal had created a puzzle that captivated the sentries' attention and gradually terrified them. From the mountaintop there was no way to explain this bizarre sight. If the sentries could have explained it they would have stayed at their posts.

If you find yourself trapped, cornered, and on the defensive in some situation, try a simple experiment: Do something that cannot be easily explained or interpreted. Choose a simple action, but carry it out in a way that unsettles your opponent, a way with many possible interpretations,

making your intentions obscure. Don't just be unpredictable (although this tactic too can be successful—see Law 17); like Hannibal, create a scene that cannot be read. There will seem to be no method to your madness, no rhyme or reason, no single explanation. If you do this right, you will inspire fear and trembling and the sentries will abandon their posts. Call it the “feigned madness of Hamlet” tactic, for Hamlet uses it to great effect in Shakespeare's play, frightening his stepfather Claudius through the mystery of his behavior. The mysterious makes your forces seem larger, your power more terrifying.

Image: The Dance of
the Veils—the veils
envelop the dancer.
What they reveal
causes excitement.
What they conceal
heightens interest. The
essence of mystery.

Authority: If you do not declare yourself immediately, you arouse expectation.... Mix a little mystery with everything, and the very mystery stirs up veneration. And when you explain, be not too explicit.... In this manner you imitate the Divine way when you cause men to wonder and watch. (Baltasar Gracián, 1601-1658)

REVERSAL

In the beginning of your rise to the top, you must attract attention at all cost, but as you rise higher you must constantly adapt. Never wear the public out with the same tactic. An air of mystery works wonders for those who need to develop an aura of power and get themselves noticed, but it must seem measured and under control. Mata Hari went too far with her fabrications; although the accusation that she was a spy was false, at the time it was a reasonable presumption because all her lies made her seem suspicious and nefarious. Do not let your air of mystery be slowly transformed into a reputation for deceit. The mystery you create must seem a game, playful and unthreatening. Recognize when it goes too far, and pull back.

There are times when the need for attention must be deferred, and when scandal and notoriety are the last things you want to create. The attention you attract must never offend or challenge the reputation of those above you—not, at any rate, if they are secure. You will seem not only paltry but desperate by comparison. There is an art to knowing when to draw notice and when to withdraw.

Lola Montez was one of the great practitioners of the art of attracting attention. She managed to rise from a middle-class Irish background to being the lover of Franz Liszt and then the mistress and political adviser of King Ludwig of Bavaria. In her later years, though, she lost her sense of proportion.

In London in 1850 there was to be a performance of Shakespeare's *Macbeth* featuring the greatest actor of the time, Charles John Kean. Everyone of consequence in English society was to be there; it was rumored that even Queen Victoria and Prince Albert were to make a public appearance. The custom of the period demanded that everyone be seated before the queen arrived. So the audience got there a little early, and when the queen entered her royal box, they observed the convention of standing up and applauding her. The royal couple waited, then bowed. Everyone sat down and the lights were dimmed. Then, suddenly, all eyes turned to a box opposite Queen Victoria's: A woman appeared from the shadows, taking her seat later than the queen. It was Lola Montez. She wore a diamond tiara

on her dark hair and a long fur coat over her shoulders. People whispered in amazement as the ermine cloak was dropped to reveal a low-necked gown of crimson velvet. By turning their heads, the audience could see that the royal couple deliberately avoided looking at Lola's box. They followed Victoria's example, and for the rest of the evening Lola Montez was ignored. After that evening no one in fashionable society dared to be seen with her. All her magnetic powers were reversed. People would flee her sight. Her future in England was finished.

Never appear overly greedy for attention, then, for it signals insecurity, and insecurity drives power away. Understand that there are times when it is not in your interest to be the center of attention. When in the presence of a king or queen, for instance, or the equivalent thereof, bow and retreat to the shadows; never compete.

LAW 7

GET OTHERS TO DO THE WORK FOR YOU, BUT ALWAYS
TAKE THE CREDIT

JUDGMENT

Use the wisdom, knowledge, and legwork of other people to further your own cause. Not only will such assistance save you valuable time and energy, it will give you a godlike aura of efficiency and speed. In the end your helpers will be forgotten and you will be remembered. Never do yourself what others can do for you.

TRANSGRESSION AND OBSERVANCE OF THE LAW

In 1883 a young Serbian scientist named Nikola Tesla was working for the European division of the Continental Edison Company. He was a brilliant inventor, and Charles Batchelor, a plant manager and a personal friend of Thomas Edison, persuaded him he should seek his fortune in America, giving him a letter of introduction to Edison himself. So began a life of woe and tribulation that lasted until Tesla's death.

THE TORTOISE, THE ELEPHANT, AND THE HIPPOPOTAMUS

One day the tortoise met the elephant, who trumpeted, "Out of my way, you weakling—I might step on you!" The tortoise was not afraid and stayed where he was, so the elephant stepped on him, but could not crush him. "Do not boast, Mr. Elephant, I am as strong as you are!" said the tortoise, but the elephant just laughed. So the tortoise asked him to come to his hill the next morning. The next day, before sunrise, the tortoise ran down the hill to the river, where he met the hippopotamus, who was just on his way back into the water after his nocturnal feeding. "Mr Hippo! Shall we have a tug-of-war? I bet I'm as strong as you are!" said the tortoise. The hippopotamus laughed at this ridiculous idea, but agreed. The tortoise produced a long rope and told the hippo to hold it in his mouth until the tortoise shouted "Hey!" Then the tortoise ran back up the hill where he found the elephant, who was getting impatient. He gave the elephant the other end of the rope and said, "When I say 'Hey!' pull, and you'll see which of us is the strongest. "Then he ran halfway back down the hill, to a place where he couldn't be seen, and shouted, "Hey!" The elephant and the hippopotamus pulled and pulled, but neither could budge the other—they were of equal strength. They both agreed that the tortoise was as strong as they were. Never do what others can do for you. The tortoise let others do the work for him while he got the credit.

ZAIREAN FABLE

When Tesla met Edison in New York, the famous inventor hired him on the spot. Tesla worked eighteen-hour days, finding ways to improve the primitive Edison dynamos. Finally he offered to redesign them completely. To Edison this seemed a monumental task that could last years without paying off, but he told Tesla, “There’s fifty thousand dollars in it for you—if you can do it.” Tesla labored day and night on the project and after only a year he produced a greatly improved version of the dynamo, complete with automatic controls. He went to Edison to break the good news and receive his \$50,000. Edison was pleased with the improvement, for which he and his company would take credit, but when it came to the issue of the money he told the young Serb, “Tesla, you don’t understand our American humor!,” and offered a small raise instead.

Tesla’s obsession was to create an alternating-current system (AC) of electricity. Edison believed in the direct-current system (DC), and not only refused to support Tesla’s research but later did all he could to sabotage him. Tesla turned to the great Pittsburgh magnate George Westinghouse, who had started his own electricity company. Westinghouse completely funded Tesla’s research and offered him a generous royalty agreement on future profits. The AC system Tesla developed is still the standard today—but after patents were filed in his name, other scientists came forward to take credit for the invention, claiming that they had laid the groundwork for him. His name was lost in the shuffle, and the public came to associate the invention with Westinghouse himself.

A year later, Westinghouse was caught in a takeover bid from J. Pierpont Morgan, who made him rescind the generous royalty contract he had signed with Tesla. Westinghouse explained to the scientist that his company would not survive if it had to pay him his full royalties; he persuaded Tesla to accept a buyout of his patents for \$216,000—a large sum, no doubt, but far less than the \$12 million they were worth at the time. The financiers had divested Tesla of the riches, the patents, and essentially the credit for the greatest invention of his career.

The name of Guglielmo Marconi is forever linked with the invention of radio. But few know that in producing his invention—he broadcast a signal across the English Channel in 1899—Marconi made use of a patent Tesla had filed in 1897, and that his work depended on Tesla’s research. Once again Tesla received no money and no credit. Tesla invented an induction motor as well as the AC power system, and he is the real “father of radio.”

Yet none of these discoveries bear his name. As an old man, he lived in poverty.

In 1917, during his later impoverished years, Tesla was told he was to receive the Edison Medal of the American Institute of Electrical Engineers. He turned the medal down. “You propose,” he said, “to honor me with a medal which I could pin upon my coat and strut for a vain hour before the members of your Institute. You would decorate my body and continue to let starve, for failure to supply recognition, my mind and its creative products, which have supplied the foundation upon which the major portion of your Institute exists.”
